

12 Street S.E. Fully Reopened - Major Traffic Impacts Removed

The RIPRI project has reached a major milestone. All work requiring the long-term lane closure on 12 Street S.E. is now complete, and all traffic lanes have been reopened.

With the final lift of asphalt now in place on 12 Street S.E. in Inglewood and 11 Street S.E. in Ramsay, all lane closures have been removed and the dedicated northbound and southbound left-turn lanes at 12 Street S.E. and 9 Avenue S.E. have been restored.

This marks the end of the most significant traffic impacts associated with the current Stage of the project and removes a major source of congestion. The contractor has fully demobilized from the 12 Street S.E. closure area and is not expected to return, aside from a limited amount of short-duration localized work scheduled for next year, including the construction of the center median just north of 11 Avenue S.E. which will be constructed in the Spring of 2027.

What's Next

Construction will continue this fall on the final major phase of the project along the west side of 11 Street S.E. between 9 Avenue S.E. and 11 Avenue S.E. Work in this area includes new sidewalks, curbs, stormwater soil cells, landscaping, street lights, and roadway improvements that will help complete the transformation of the corridor.

We will also be activating the new traffic signal at 12 Street and 11 Avenue S.E. later this month, improving access, vehicle routing options and safety for all road users.

Weather permitting, we expect to complete all major underground and concrete work along 11 Street S.E. before the winter shutdown. Completing this work now will allow the remaining activities in spring 2027 to be completed with significantly less disruption to the community.

Thank you to residents, businesses, and everyone travelling through Ramsay and Inglewood for their patience as this important work has progressed. With 12 Street fully reopened, the Stage 1 work is entering its final phase and the long-term benefits are beginning to take shape.
